

Model 4040 LA

8 A max out • 90-264 VAC input

- 3-step charge control with current detection and timer
- Universal input voltage 90-264 VAC
- 2-pin IEC 60320 C8, 3-pin C6 on request
- Output terminal: Battery clips, DC conn., push-on terminals or open ends
- Temp. compensation of charge voltage
- Wake up and low current start-up of deeply discharged batteries
- Safety indication and protection: against reverse polarity, short circuit, charging battery packs with the wrong number of cells and safety timer run-out
- Active power factor correction
- · Approvals:
 - Medically certified

Safety: EN 60601-1 ed. 3.1 and ed. 3.2 Home healthcare EN 60601-1-11

EMC: EN 60601-1-2 ed. 4

- UL approved
- Custom specifications on request:

Charging parameters, connectors, cords, logo print, housing/open frame/IP rating and certificates. For more information: custom design info sheet

Notes:

Desktop unit

Wall mount bracket available

With active power factor correction

2MOOP standard, 2MOPP available

Wall mount bracket available

With battery clips and temp sensor

Std output cord: L 1.2m, AWG 14, UL 2464

Technical drawing

Charging characteristics and LED indication

STEP 1 - BOOST CHARGE

LED-indicator: YELLOW

The charger is in constant current mode (CC), charging with the maximum current until battery voltage reach Top-Up level.

STEP 2 - TOP-UP CHARGE

The charger is in constant voltage mode. The LED-indication will be FLASHING YELLOW during Top-up charge. The charger stays in this mode until the charge current decreases to charge termination level or the Top-Up Charge Timer runs out. The battery is charged to its full capacity at the end of this step

STEP 3 - FLOAT CHARGE

The LED-indication on the charger is GREEN and the battery is fully charged. The charger is in standby mode. The charge voltage is at standby level and the charger may remain connected to the battery. The charger will return to boost charge if the battery is used. A load larger than the cut-off current will initiate a new charge cycle.

BATTERY NOT CONNECTED

Battery not connected is indicated by FLASHING GREEN. In this mode charger will apply short pulses attempting to wake up deeply discharged batteries.

ERROR INDICATIONS

2 red blinks: Battery is connected to charger with wrong polarity!4 red blinks: Charging of wrong lower voltage battery pack (e.g. 12V)

will be limited to 1.4A and terminated after 30min

5 red blinks: Safety timer has run out. Check battery status or capacity.

6 red blinks: Defect battery

LED off: Battery voltage is too high (>32V). Check battery voltage.
